

All our types of training require a minimum of 2 persons

TRAINING

PRODUCT SPECIFICATIONS

PURPOSE

Modusystem doesn't only provide lift monitoring and diagnostic solutions, but also organizes training days. On these training days our goal is to give the technicians more knowledge about the Modu-tool and the elevator controls they have in maintenance.

We have 2 different kinds of training: training for the Modu-tool and training for a certain/multiple elevator controller(s).

The Modu-tool training is for elevator technicians who want to get the best out of their Modu-tool. In one day they'll learn all the tips and tricks of the Modu-tool and get some information about our subproducts. They'll also get time to use our real-time elevator controllers to practice what they've learnt in our training centre afterwards (practice in finding and solving errors, making a learn run, unlock controllers, and more).

The Training Single Elevator Control and Training Multiple Elevator Controls however, are for becoming an expert in the chosen elevator brand(s). When the mechanics have a lot of elevators with the same brand in maintenance, it might be very useful to follow this course. Learn all the features and troubles of the five big brands.

On the next page you can find more details about our training.

For the training we support Otis (all controls), Schindler (all bionic models), Kone (LCE), Orona (Arca 1 and 2) and Thyssen MCI.

For training groups (min. 5 persons) we use different prices. Ask for the possibilities.

MODU-TOOL BASIC TRAINING

€495 p.p

- Requires a minimum of 2 persons
- We'll explain how the Modu-tool works for all the controllers we support (practice in finding and solving errors, making a learn run, unlocking controllers, and more)
- We'll explain our sub-products like the Modu-prog and Modu-connect
- After the training you will get time to practice with the Modu-tool and elevator controllers
- You'll learn the basics of the subsequent training
- This training lasts one day (6-7 hours)

MODU-TOOL MULTIPLE CONTROLLERS TRAINING

€990 p.p

- Requires a minimum of 2 persons
- Multiple controllers you want to learn more about and practice with simulation software on real lift controllers. We can also attach the controllers to our Modu-lift, so the controllers can work real-time
- Program outside commands
- Program basic board
- Read and program regulators
- Read and program door boxes
- Learn about learn run and other adjustments that are important for the controllers
- Analyze fault codes
- Learn to understand output signals
- Learn how to test the lift
- This training lasts two days (6-7 hours per day)

SPECIFIC REQUESTS

€.... p.p

- Do you want to learn something specific? Then send us an e-mail to sales@modusystem.com to see what the possibilities are.
- After the training you will get time to practice with the Modu-tool and lift controllers.
- Requires a minimum of 2 persons
- Duration of the training depends on the request.
