

# MODU-PROG

## PRODUCT SPECIFICATIONS

### DETAILS

Measurements:  
150x80x30mm

Price:€399

### REQUIREMENTS

When using the Modu-prog, you need:

- Modu-prog
- Kone LCE controller
- Modu-tool charger (or 12V charger)
- Modu-tool
- Green config cable

### PURPOSE

The Modu-prog is for unlocking Kone LCE menus with firmware 6.6 or lower. After 10.000 runs, the menu of a Kone LCE locks. Full access of the menu is required to provide high quality elevator maintenance. The Modu-prog replaces the need to purchase a KNX unit or to contact Kone for help.

### COMPONENTS

The Modu-prog is already delivered with 1 new NVRAM. That NVRAM fits in the 28 pins socket on the Modu-prog. On top of the Modu-prog you can also find the power LED. At the front you can find the connection for the power cable and the connection for the cable which goes from the Modu-prog to the Modu-tool.

### COMPATIBILITY

The Modu-prog must be used on one of the following Kone LCE controllers:

1. MRL with keypad and LCE control on one PCB and outside the shaft
2. MRL with keypad panel outside and LCE control inside the shaft
3. MRL with keypad in- and outside the control and with NVRAM
4. LCE control with keypad and LCE control on one PCB and control in a machine room

For more info, ask for the Modu-prog manual.
