

MODU-VIEW

PRODUCT SPECIFICATIONS

DETAILS

Measurements:
150x95x30mm

Price: €396

REQUIREMENTS

When using the Modu-view, you need:

- Elevator control we support
- Modu-view package

PURPOSE

The Modu-view is a cost efficient monitoring platform for all the elevator controls that we currently support. It provides an in-depth look at the current state and the history of the elevator. Elevator owners and technicians will be able to get better insight into the behavior of their elevators on our web-based monitoring platform and will be notified by e-mail of any irregularities. The Modu-view makes it possible to see the current state in real time and analyse the history of your elevator. You can receive notifications for errors and customize the reason for receiving notifications.

COMPONENTS

The Modu-view is provided with a sim card, charger, antenna and the matching cable for the elevator control. The Modu-view has different LED's which can show you what the status of the Modu-view and the lift is. When all LED's are ON, you can find the elevator listed on your dashboard within our Online Monitoring Platform.

PLATFORM

The Modu-view Hardware is part our Modu-view Platform. The Platform consists of:

- The Hardware (the Modu-view itself)
- The Dashboard (which shows you all the information of the elevator on one interface)
- The Management
- The Connection (by CAN bus or ethernet)
- The Data storage

ADD-ONS

The Modu-view will be installed in the lift controller. For the shaft you have a couple of possibilities. You can choose to add a Modu-sense, Modu-display, Modu-cam or Modu-speak to the Modu-view.

7 + 3 IN 1

With the Modu-view you can access a number of different functions. You can control those functions on just one interface: your personal customized Modu-view portal. 1 Modu-view enables you to observe 7 items of lift data and to give 3 different commands. These include:

(observations:)

1. The door zone
2. Door open/close
3. Number of runs
4. Position
5. Status of the processor
6. Fault codes
7. Controller specify

(commands:)

8. The lift making a car call
9. A lift specified action (as a learn run or fatal reset)
10. The lift going out of order

The Modu-tool must be used for elevator diagnostics on site and the Modu-view for remotely monitoring. This combination allows the technician to save a lot of time and money on unexpected breakdowns.

COMPATIBILITY

These are the elevator brands the Modu-view supports:

- Relay controllers with 8 input
- All Otis
- Schindler bionic
- Schindler MX-GC
- Kone LCE
- Thyssen MCI
- Orona Arca 1
- Orona Arca 2
- Kollmoren Mpk400
- Kollmorgen Mpk411
- Arkel Arcode
- Bonke
- Lisa
- Digital Advanced Controllers (MEC32)
- Rst
- B&P
